THE ENGINEER'S and MECHANIC'S ENCYCLOPÆDIA, a new and improved edition, comprising Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of Two Hundred Engravings. By Leon Lalanne, C.E. Inspector-General of Railways, and Professor Hellins, of King's College, London. The useful processes of Mechanical Science have been collected, and the principles of each illustrated from the best performances in that department of Engineering which is treated of in the Encyclopædia. The inventions and discoveries recently made have received the careful consideration of the Editor; but, as the value of such can only be ascertained after a considerable time has elapsed, by the experience of new methods and tests through a series of years, those matters only have been admitted into the work which, after full consideration, appeared to the Author entitled to be considered as valuable additions to the stock of Practical Knowledge. The whole has been carefully corrected, and, as far as it was practicable, brought down to the present time. Many parts of the work have been entirely re-written, and the whole will be found to be comprised within Two Volumes, 8vo. cloth, lettered, price 24s.
